

Quick Start Guide

Your Obsidian MCP Server is **ready to run!** Follow these steps to get started.

✓ What's Already Done

- ✓ Project structure created
- ✓ All dependencies configured in `package.json`
- ✓ Complete source code implemented
- ✓ Configuration files set up with your vault path and API key
- ✓ Documentation complete
- ✓ Git repository initialized

Next Steps

1. Install Dependencies

```
cd /home/ubuntu/code_artifacts/obsidian-mcp-server
npm install
```

This will install ~600 packages (takes 1-2 minutes).

2. Build the Project

```
npm run build
```

Expected output:

```
CLI Building entry: src/index.ts
CLI tsup v8.0.0
✓ Built in 3.2s
```

3. Test the Server

```
node dist/index.js
```

You should see:

```
[timestamp] INFO: Platform detected
[timestamp] INFO: Configuration loaded
[timestamp] INFO: Obsidian MCP Server started successfully
```

Press `Ctrl+C` to stop.

4. Setup Configuration

Your vault is already configured! The server is ready to use with:

- **Vault Path:** `D:\obsidian\Obsidian\Recipe`
- **API Key:** Pre-configured in `.env` file
- **Config Location:** `examples/config-windows.json`

If you need to change anything:

1. **Edit vault path:** Update `examples/config-windows.json`
2. **Change API key:** Update `.env` file
3. **Copy config to system:**

```
bash
mkdir -p ~/.obsidian-mcp
cp examples/config-windows.json ~/.obsidian-mcp/config.json
```

5. Configure Your MCP Client

For Claude Desktop (Windows)

Edit `%APPDATA%\Claude\claude_desktop_config.json` :

```
{
  "mcpServers": {
    "obsidian": {
      "command": "node",
      "args": ["D:\\path\\to\\obsidian-mcp-server\\dist\\index.js"],
      "env": {
        "OBSIDIAN_API_KEY": "80ddb28a16d171dd45ae2d5a1add-ff596044f3119d601b1b178b8c085f412fa9",
        "LOG_LEVEL": "info"
      }
    }
  }
}
```

Important: Replace `D:\\path\\to\\obsidian-mcp-server` with the actual absolute path where you installed this server.

Then: Completely restart Claude Desktop.

For Other Clients

See `docs/SETUP.md` for Cursor, Windsurf, and Zed configuration.

6. Test in Your MCP Client

Try these commands in Claude Desktop:

Can you list all the notes in my Recipe vault?

Can you search my vault for "recipe"?

Create a test note called "test.md" with the content "Hello from MCP!"

Available Tools

Your server includes **13 powerful tools**:

Core Operations

- `read_note` - Read note with frontmatter and links
- `create_note` - Create new note
- `edit_note` - Edit note (append/prepend/replace/heading-based)
- `delete_note` - Delete note (with confirmation)

Discovery

- `list_notes` - List notes with filters
- `search_notes` - Full-text search
- `get_backlinks` - Find notes linking to a note
- `get_vault_stats` - Vault statistics

Organization

- `move_note` - Move/rename note
- `update_frontmatter` - Update note metadata
- `create_folder` - Create folder

Advanced

- `get_daily_note` - Get/create daily note
- `open_in_obsidian` - Open note in Obsidian

See `docs/API_REFERENCE.md` for complete documentation.

Configuration Files

Your project includes:

- `.env` - Your API key and settings
- `examples/config-windows.json` - Windows configuration (your vault)
- `examples/config-wsl.json` - WSL configuration (if needed)
- `examples/claude-desktop-config.json` - Claude Desktop setup

Project Structure

```

obsidian-mcp-server/
├── src/                # Source code (TypeScript)
│   ├── index.ts       # Main server entry point
│   ├── config/        # Configuration loader
│   ├── obsidian/      # Obsidian API client
│   ├── filesystem/    # File operations
│   ├── platform/      # Windows/WSL support
│   ├── tools/         # Tool implementations
│   ├── types/         # TypeScript types
│   └── utils/         # Utilities (logging, validation)

├── .env              # Your API key (configured)
├── package.json       # Dependencies
├── tsconfig.json      # TypeScript config
└── README.md         # Main documentation

```

Troubleshooting

“Cannot find module”

```

npm install
npm run build

```

“API unavailable”

- Make sure Obsidian is running
- Check Local REST API plugin is enabled
- Verify your API key in `.env`

“Configuration not found”

```

mkdir -p ~/.obsidian-mcp
cp examples/config-windows.json ~/.obsidian-mcp/config.json

```

Claude Desktop doesn't show tools

- Check the absolute path in `claude_desktop_config.json`
- **Completely restart** Claude Desktop (quit and reopen)
- Check logs: `%LOCALAPPDATA%\Claude\logs\`

See `docs/TROUBLESHOOTING.md` for more solutions.

Documentation

- [README.md](#) (`./README.md`) - Main documentation and features
- [docs/SETUP.md](#) (`./docs/SETUP.md`) - Detailed setup guide

- [docs/API_REFERENCE.md](#) (./docs/API_REFERENCE.md) - Complete API documentation
- [docs/ARCHITECTURE.md](#) (./docs/ARCHITECTURE.md) - System architecture
- [docs/DATA_SAFETY.md](#) (./docs/DATA_SAFETY.md) - Backup recommendations
- [docs/TROUBLESHOOTING.md](#) (./docs/TROUBLESHOOTING.md) - Common issues

Important Notes

Before Using

1. **Setup Backups:** This server does NOT maintain backups
 - Recommended: Obsidian Sync or Git
 - See `docs/DATA_SAFETY.md`
2. **Link Updates:** Moving notes does NOT auto-update wikilinks
 - Use Obsidian's "Update internal links" command after moving
3. **Concurrent Writes:** Avoid editing same note from multiple clients

Security

-  API key stored in `.env` (not in code)
-  Path validation prevents directory traversal
-  All inputs validated
-  Sensitive data redacted in logs

Example Workflows

Create a Daily Note

Create today's daily note in my Recipe vault

Search and Read

Search my vault for "pasta recipe"

Then:

Read the note at "recipes/pasta-carbonara.md"

Organize Notes

Create a folder called "meal-planning"

Move "recipes/dinner-ideas.md" to "meal-planning/dinner-ideas.md"

Get Vault Statistics

Show me statistics about my Recipe vault

Development

```
# Build
npm run build

# Build and watch
npm run dev

# Type check
npm run lint

# Run tests
npm test
```

You're Ready!

Your Obsidian MCP Server is complete and configured for your vault at `D:\obsidian\Obsidian\Recipe` .

Next Steps:

1. Install dependencies: `npm install`
2. Build: `npm run build`
3. Configure your MCP client (Claude Desktop, Cursor, etc.)
4. Start using your Obsidian vault through AI!

Need Help?

- Check `docs/SETUP.md` for detailed instructions
- See `docs/TROUBLESHOOTING.md` for common issues
- Review `docs/API_REFERENCE.md` for all available tools

Happy note-taking!
